PROFESSIONAL SUMMARY

A proficient Full-Stack Developer with backend experience in Java, Spring, and .NET, knowledgeable in microservices architecture and Agile methodologies. Gained experience in corporate environments like Yapı Kredi Technology, with a proven ability to develop scalable and high-performance B2B financial applications.

SKILLS

Languages & Frameworks — Java, Spring Boot, .NET Framework, JavaScript, HTML/CSS, React, English (YÖKDİL: 92.5)

Databases & Tools — PostgreSQL, MSSQL, Docker, Git, Jira, Swagger, JUnit

Concepts & Architectures — Microservices Architecture, RESTful API Design, OOP, Agile, JWT

PROFESSIONAL EXPERIENCE

ATP Tradesoft

Software Development Assistant Specialist

07/2024 – 04/2025

Istanbul, Türkiye

- Developed and maintained .NET-based virtual branch applications for platforms serving 38 corporate clients and managing 51% of the BIST trade volume.
- Implemented backend functionalities, such as rate limiting for specific features, to enhance security and stability in response to client requests.
- Localized the entire platform UI to support English and Azerbaijani for a new international corporate client.

Yapı Kredi Technology

Intern Software Engineer

06/2022 – 08/2023

Remote

- Actively supported enterprise backend development processes using Java and Spring Framework.
- Wrote comprehensive unit tests using JUnit to ensure the reliability of new service modules during a monolithic to microservices transformation project.
- Gained hands-on experience with Agile methodologies, including version control with Git and task tracking with Jira on a large-scale corporate project.

EDUCATION

Ege University

Bachelor's Degree, Computer Engineering

08/2019 – 07/2023

Izmir, Türkiye

- GPA: 3.70/4.00 | High Honors Degree
- Thesis: "Analysis of Stock Market Index Movements with Machine Learning"

PROJECTS

Full-Stack Digital Life Assistant

Java, Spring Boot, React, PostgreSQL, Docker, Gemini AI

- Developed a secure RESTful API using JWT and Role-Based Access Control (RBAC).
- Designed a modular React UI with a dedicated admin panel and modules for users to manage tasks and personal finances.
- Integrated the Google Gemini API to generate weekly personal productivity reports by analyzing user task completion data.
- Automated API documentation with Swagger and versioned database schema management with Flyway.

Microservices-Based CRM Application

Java, Spring Boot, PostgreSQL, Docker, Microservices

- Developed a corporate CRM application using a microservices architecture as part of a 6-person team during the Turkcell Geleceği Yazanlar Bootcamp.
- Decomposed business logic into separate services (auth, customer, invoice, order) and orchestrated all services using Docker.
- Utilized DTOs and MapStruct to ensure clean data flow between modules and to automate object mapping.
